

1 5 kw wind turbine

1 5 kw wind turbine

Sauer is focused on creating small vertical axis wind turbines that can be useful to people like you and I. They manufacture small wind turbines that can be installed on top of homes and small buildings producing energy. Their products not only allow us the opportunity to reap the benefits by reducing our utility bills, but it also gives us the "choice" to make a difference for our future by using renewable energy. Oh, let's not forget the tax rebate possibilities our government may offer us too by purchasing a wind turbine! Cha-Ching!

The small Vertical Axis Wind Turbines (VAWT) turbines are easy to install and can handle various weather conditions. There are many opportunities for the world to utilize turbines: oil rigs, ships, islands, remote facilities, tall bridges and tunnels, communication towers, and off-shore (Hydro). The electric car may also benefit from Sauer's innovation in the near future. The sky is the limit when it comes to renewable energy.
