

Aaron solar energy policy

Aaron solar energy policy

Aaron became invested in solar energy access as a result of his research on solar energy in developing countries. "When I learned that 80% of energy infrastructure investment in the 21st century will take place in developing countries where access is such a key issue," says Aaron, "I was hooked."

At the Summit, Aaron wants to highlight two key areas that he feels can lead to the greatest unlocking of our collective potential to deliver energy to those without: financing and training. While the need for significantly more funding is more well-established, Aaron says that "there is an unnerving lack of attention to the need to develop business and vocational skills. Universalizing access will require the creation of thousands of companies, large and small."

Aaron Levine serves as a senior legal and regulatory analyst. Generally, Levine focuses on legal, regulatory, and policy issues related to geothermal, hydropower, solar power, wind energy, transmission, alternative fuels, and other energy-related matters. Levine has specialized expertise in environmental and energy law and project siting considerations.

Solar United Neighbors does not discriminate on the basis of race, color, national origin, sex, disability, or age in its programs or activities. Solar United Neighbors is a 501(c)(3) nonprofit organization. EIN: 46-2462990
