Explore key policies and measures for EV deployment. The table highlights current as well as announced key policies and measures that support the deployment of electric vehicles (EVs) and zero-emission vehicles (ZEVs) by region and country.

This brief narrative about the rise of a Norwegian EV industry illustrates both the importance of a domestic policy push by policy instruments on the production side in Norway, as well as a policy pull from demand-side policy instruments abroad.

In 2023, global electric car sales reached nearly 14 million -- 18 percent of all new cars sold last year, the IEA estimates. For the global transportation sector to move from 18 percent to exponential adoption of zero-emission vehicles (ZEVs), supportive policy will need to be enacted worldwide, and supply-side policies are one component of this policy equation.

The Electrification Coalition advocates for federal policies to accelerate the adoption of EVs. These policies can be categorized into four core pillars: purchase incentives, charging infrastructure funding, federal fleet electrification funding, and EV manufacturing and supply chain funding and programs.

The Association of Fleet Professional's electric vehicle guides cover examples of setting out an EV policy; hints and tips for assessing the suitability of electric vehicles, example sections for the company car policy; and employee communications with regards to electric vehicles.

The Association of Fleet Professional's EV, Alternative Fuels and Low Carbon Committee shares key considerations when reviewing a company car policy for electric vehicles and some best practice suggestions

The Association of Fleet Professional's electric vehicle guides cover examples of setting out an EV policy; hints and tips for assessing the suitability of electric vehicles, example sections for the company car policy; and employee communications with regards to electric vehicles.
