

Amman battery testing

Electrical performances test in isobaric and isothermal conditions Analysis of breathing and swelling with 0.5 um displacement accuracy Get the data to generate the digital twin of your battery

With our testing solution it is possible to perform extensive sensitivity study and find the best conditions at which your battery can operate. Our test solution leads to an improvement of performance and lifetime.

With our testing solution it is possible to obtain better models to perform an optimized design of the battery system. The obtained models can also be used for calibration of the BMS to extend the lifetime of the storage system

Our test bench offer a plethora of testing possibilities. The multi-physics concept and the automated system allows to set-up nearly any testing combination. Our team can help you to define the best technical solution suitable for your needs, get in touch with us!
