

Antigua and barbuda power outages

Antigua and barbuda power outages

The Manager of the APUA Electricity Business Unit, Andre Mathias, explained that a detailed report from the Antigua Power Company (APC) will be analyzed to prevent future incidents.

Can someone explain why the Ministry of Health hasn't taken any action on the apartment complex by Epicurean area that has its waste water settling on Luachland Henry Drive in front of Canada Place. This is a health hazard an eyesore and this joke government has done absolutely nothing because of friend and company. This country is a real cartoon place.

The Antigua Public Utilities Authority (APUA) is seeking to explain the island-wide electricity outage that took place on Monday, November 7, when the power went out at approximately 10:15 a.m. for a little longer than an hour.

APUA confirms that its electrical network experienced a total system collapse; and, based on a preliminary assessment, a fault on the 69KV line between Crabbs and Lavington Substations caused the issue.

It claims that further investigations are being carried out to determine the cause of the fault on the 69KV line. Further, it says, mitigation measures against the recurrence of this type of fault are being considered.

However, home-owners in St. Peter tell REAL News they are "fresh out of patience with APUA and their electricity story." They say their area was without power late Sunday night and, again, late Monday night into Tuesday morning.

"Tell APUA that people cannot afford to be replacing their things. Tell them the gas price is still high. Tell them that crime is still high, and we need our lights to stay on. It is too much and too often, now," she declares.

WADADLI POWER PLANT was supposed to help with this. What has become of those NEW engines that Harold Love and UPP bought WITHOUT PARLIAMENTARY APPROVAL??? George Wehner needs to take his camera and show us the WPP.

We still owe hundreds of millions to Foster Wheeler for the Tango Plant that the government sold as scrap metal. Find out from the P M, who in the party he had planned to expose for offering money to say that the plan was refurbished.

The engines are new, The engines are new Ring the alarm! The engines are new blood-in-hotel-lobby press conference Baldwin Spencer tell Antigua people the engines are new

Antigua and barbuda power outages

Initial findings indicate the first set of outages was planned for maintenance at Cassada Gardens Substation, while the second, unplanned interruption resulted from a failure at Friars Hill Substation.
