

Batteries plus

Batteries plus

Batteries Plus is an American retail chain of 600+ franchise outlets founded in 1988 that sells and recycles batteries of varying size and voltage that provide power to operate consumer electronics, w...

These batteries are designed to be "racked and stacked" in temperature controlled cabinets which PowerPlus Energy sell separately. They do have an outdoor rated cabinet called the slimline series.

The in-built battery management system (BMS) will monitor the internal current, voltage, temperature and cell characteristics. This helps protect the battery by turning it off if it gets too hot, the current goes too high, or if the voltage fluctuates too much. Once the battery's temperature, current or voltage normalises, then the BMS will turn it back on. The BMS also enables systems to be upgraded at any stage through the warranty period without the new batteries being impacted by the older more degraded batteries already in the system.

You can scale the nominal capacity of your battery system due to the modular design of the battery and the fact that it's designed to be infinitely scalable. Therefore you have more flexibility with regards to your energy storage capacity for the future. This will be useful for those homeowners who later on find their night time use of appliances is put under pressure in the future.
