Best rechargeable batteries

We recommend these products based on an intensive research process that's designed to cut through the noise and find the top products in this space. Guided by experts, we spend hours looking into the factors that matter, to bring you these selections.

It's hard to argue with the convenience of battery-operated household appliances. With no annoying cord to bog you down, you can easily carry your battery-run items - hand vacuum, cordless drill - wherever you need to go without any worries about finding an outlet for the plug.

Unfortunately, traditional batteries require frequent replacements, which can get rather pricey. They're not great for the environment, either. Thankfully, you can now use rechargeable batteries to power many of your favorite devices. Rechargeable batteries don't require replacement. As the name suggests, you have only to recharge them when you run out of juice. After a short while, the batteries are ready to go again.

If you're ready to buy some rechargeable batteries, we invite you to check out our recommendations. For general tips on shopping for rechargeable batteries, see our comprehensive guide.

Rechargeable batteries are economical. While it's true that rechargeable batteries cost more upfront, you save money in the long run. Why? Because you can use them hundreds, if not thousands, of times. You'll quickly earn back your investment when you buy rechargeable batteries.

Rechargeable batteries are convenient. You don't have to run out and buy new batteries every time your alkalines burn out. And with a little forethought, you can arrange it so that you always have a set charged and ready to go.

Rechargeable batteries are environmentally friendly. They are an eco-friendly alternative that you can feel good about using because they don't contain environmentally hazardous chemicals or metals. And because they can be used repeatedly, rechargeable batteries require fewer natural resources to produce than single-use batteries.

When you shop for rechargeable batteries, you'll find that there isn't just one "type." Below, we delve into four of the main types of rechargeable batteries from which to choose.

NiCad batteries were the first rechargeable batteries to hit the market, but they are a poorly performing option these days. They also contain a toxic metal, cadmium, which is a concern for many people.
