

Bratislava renewable energy storage

Za vyše 25 rokov pôsobenia na Slovensku sme realizovali mnoho významných projektov v oblasti výrobných a automatizačných technológií naprieč rôznymi priemyselnými odvetvami. Zručnosti a skúsenosti našich špecialistov zaručujú rýchle a kvalitné prevedenie najmodernejších technológií do vašich projektov.

The Slovak Republic is situated between 48 and 50 degrees north latitude. The solar radiation flux achieves a maximum of 1,100 kWh per m², so that for half of the year it receives 806 kWh/m². The technical potential of solar energy has been estimated at 5,200 GWh annually, which is about 12.5 % of the total technical potential of renewable power sources in Slovakia.

Slovak state-owned or public companies interested in purchasing power generating equipment issue a public tender with technical specifications. Private companies prefer to contact potential suppliers directly. They also may issue a public tender with technical specifications. Each public tender is published in Obchodný Vestník magazine, which is issued by the Slovak Public Procurement Office.

Slovak companies often finance purchases of power generation equipment through bank loans. Slovak companies also use performance contracting, which means that equipment is paid from savings. Generally, financing details are complex and set individually for each contract. A list of local Banks is available at The National Bank of Slovakia website.
