Capacity of solar plant in ghana for ipp

Singapore-based tech company G8 Subsea has been awarded a letter of intent by the Bui Power Authority Ghana for the installation of a 65-megawatt (MW) floating solar system at the Bui Hydro Dam facility.

In a statement, G8 Subsea, which has expertise in offshore and renewable energy projects, will install the GPM-65 Solar-Hydro System which will occupy around 350,000 square meters of water space at the Black Volta River near the hydro dam.

...there are many ways you can work with us to advertise your company and connect to your customers. Our team can help you design and create an advertising campaign, in print and digital, on this website and in print magazine.

We can also organize a real life or digital event for you and find thought leader speakers as well as industry leaders, who could be your potential partners, to join the event. We also run some awards programmes which give you an opportunity to be recognized for your achievements during the year and you can join this as a participant or a sponsor.

An independent power producer (IPP) is a private company that generates electricity and sells it to utility companies or industrial consumers without being owned or controlled by them. The IPP model has emerged as an essential component of the power sector, especially in developing countries where they have helped to increase the generation capacity of electricity.

Renewable energy projects such as wind and solar power have been a successful focus for independent power producer (IPP). These projects require significant upfront capital costs but offer lower operating costs and long-term stability in terms of fuel price risks. Apart from this, IPPs are encouraged by governments as a successful means of increasing competition and improving efficiency in the electricity sector.

IPPs secure long-term power purchase agreements with utilities or industrial consumers, ensuring a steady revenue stream for the project. They are also involved in conventional power projects such as gas-fired power plants. In many cases, IPPs have been able to develop projects more quickly and efficiently than utilities, which can be weighed down by bureaucracy and political considerations.

Our mission is to empower individuals, businesses, and communities to embrace sustainable practices that protect our planet and ensure a brighter tomorrow for generations to come.

Indian-based Synergy Consulting is the financial adviser for Manah 1 and 2. The UK's DLA Piper and Germany's Fichtner are providing technical and legal advisory services, respectively.
