Cargill ghana solar

AB Solar Africa is active in Ghana and other (West) African countries. For us, it is very important to involve local people to help us do the installation. We will make sure that our local team will be thoroughly trained by us, so they will be able to perform installations, maintenance, and service. By doing so, we can assure a proper functioning of your system and support the local economy at the same time.

So that begs the question, what kind of person or company can help from the start of a project? This may be an option where Engineer, Procure, Construct (EPC) consultants can step in and come to your rescue. If you're lost, an EPC can help you find your direction. For this, of course, you can contact AB Solar Africa to assist in the whole process of your solar installation.

For the ramming of piles, we have the Orteco Smart 800 pile ramming machine in Ghana. for any work in road safety fencing or solar ground mount we can assist and supply our pile ramming machine.
