

Cheapest type 2 ev charger

Cheapest type 2 ev charger

The solution to faster charging is simple: upgrade your home charging setup with the much faster Level 2 charger. A Level 2 charger displaces 7.5-11.5 8-9 kW, which is up to 11 times faster than a Level 1 Charger.

Need some help finding the right Level 2 charger for your EV? We did some digging to find your 6 best options at an affordable price. Keep in mind that Level 2 chargers require an electrician to install so get a consultation before making a final purchase.

I mean, let's be honest. You wouldn't buy a refrigerator just because it's the cheapest... especially if it didn't fit a gallon of milk. Like your refrigerator, you may also want to consider these other features before purchasing your Level 2 EV Charger.

The amp draw from the charger can be adjusted in increments of 1 to accommodate nearly any home's electrical panel. To achieve the fastest charge you will need to have the Tesla Wall Charger hardwired into your home. Fortunately, unlike other chargers, the charger can be removed, repaired, or replaced without requiring an electrician to remove it.

If you're looking for the best Level 2 EV Charger under \$500, you have found it. The Lectron V-Box offers everything you need to start charging your electric car. What we like best about this charger is that it can achieve 9.2 kW allowing you to charge your EV up to 9 times faster than a Level 1 Charger.

Unlike some of the other chargers, where you have to decipher the flashing colored lights, the Lectron V-Box has an easy-to-read LED display that gives you confidence that your charger is operating correctly.

If you're looking for a home Level 2 EV charger that can offer customizable features, then look no further than the EvoCharge EVSE. When you order this small wall-mounted charger you can select from a sizable list of options and upgrades.

A common complaint from users is the short receptacle cord that runs between the EvoCharge EVSA and the wall installation point. Many users found it frustrating that they had to pay to move the location of the outlet to accommodate the charger. It is also a disappointment that the app and scheduled charging aren't included with the basic package. Including this may have made it our Best Choice Overall!

The WallBox Pulse Plus is one of our favorites. It is amazing to us that WallBox fit so many features in this small discrete design. These features include Google Assistant, Alexa, scheduled charging, and 9.6 kW of maximum charging.

The Wallbox is also NEMA 4 weather rated and it's lockable, so you can feel comfortable mounting it outside.

Cheapest type 2 ev charger

The 25-foot-long cable is also ideal for charging in the driveway or having multiple EVs. Additionally, the Wallbox can load share with another Wallbox if you decide you would like to have two electric cars charging at once.

The negatives are, once again, a short receptacle cord, and no information screen on the charger to tell you if it is operating correctly. The user must use the included app to get current charging data. Reviews state that when the app is updated it cancels the current charging schedule and has left some users unsuspectingly uncharged.

The biggest concern is the multiple reviews stating that the Wi-Fi is difficult to connect or that it frequently loses its connection. Even the 5-Star reviews on Amazon note this complaint. Some even stated that customer service told them that they needed to place the wireless router next to the charger. This seems like a hardware issue that Wallbox could fix in future models.
