

Chemical Vulcanising Systems

suurDOS(R) dosing systems are designed and produced by Suurmond and can be delivered with or without control system. Suitable for liquids with low and high viscosities, as well as a wide temperature range. They provide a robust and reliable pulsation-free solution for your dosing demands. Available as single channel dosing (one liquid) or multi-channel dosing (with a variety of outlets), one or more components, with or without buffer tank, heated and non-heated, ATEX,

suurDOS(R) systems are more and more used instead of classic dosing solutions with diaphragm or piston pumps. The pulsation free suurDOS(R) solution makes it possible to dose more accurately and to decrease the required dosing rates, improving product quality and characteristics.

Controlled lab reactors are part of FlexyConcept; an automation platform for chemical development and scale-up to pilot plant. Besides controlled lab reactors, FlexyConcept is also applied in reaction calorimetry and thermal safety.
