

## Chisinau electricity regulations

22,80. +0,01. Diesel. 19,94. +0,05. \*the maximum retail prices of standard petroleum products, are set by the National Agency for Energy Regulation according to the Methodology for calculating and applying the prices for petroleum products. Harta interactiv? - Informa?ia privind pre?urile afi?ate de sta?ii la data de 25.11.2024.

Drafts and approves regulations, methodologies and other normative acts. Responsible for the approval of prices and tariffs for electricity, natural gas, district heating and water supply and sewerage services. Responsible for standard gasoline and diesel retail price setting.

The asynchronous interconnection in the southern part (Isaccea - Vulcanesti - Chisinau) has started and will consist of the construction of a new 400 kV power line from Vulcanesti to Chisinau and a back-to-back substation of 600 MW in Vulcanesti.

Chisinau on 29 March 2018, focused on accelerating the adoption of the new draft Energy Efficiency Law, which will bring major energy savings for consumers and industry alike. By explaining what compliance entails, the benefits it can bring as well as sharing experience and best practice from the EU, the Energy Community

These regulations address critical aspects such as energy supply security, climate actions, and the design of the electricity market. Their implementation is vital for modernizing Moldova's energy sector and ensuring full alignment with EU norms.

The Republic of Moldova is at a critical juncture on its path toward European integration, with the environment, energy, and climate change being key areas in this process. Aligning with European standards is not just a bureaucratic requirement but a necessity for ensuring a sustainable and prosperous future for the country's citizens. In this context, the European Union (EU) and the United Nations Development Programme (UNDP) are contributing to the modernization of legislation and the implementation of policies that address global environmental and energy challenges.

The bilateral legislative screening process involves a detailed assessment of existing legislation in essential sectors such as energy, air, climate, waste management, and water, to identify gaps and areas requiring adjustment. The UNDP has provided significant support to the Government of the Republic of Moldova during this stage through the EU-funded programme "Addressing the impacts of the energy crisis in the Republic of Moldova", contributing not only with technical expertise but also with assistance in developing more robust and sustainable policies.

Moldova has made progress in aligning its legislation with European standards in the fields of environment and energy. Among these achievements are the development of the Monitoring, Reporting, and Verification (MRV) System for greenhouse gas emissions, which is an important step toward meeting the country's climate objectives.

Currently, several essential strategic documents, developed with the programme's expertise, are in the final stages and are expected to be approved by the Government of the Republic of Moldova in the fall of 2024.
