

Commercial battery energy storage 95 kWh

Commercial battery energy storage 95 kWh

The Huawei LUNA2000-2H1 Energy Storage System is a high-capacity energy solution engineered to deliver superior performance and efficiency. With a capacity of up to 200 kWh, the modular ESS is particularly geared towards the flexible power needs of larger residential properties, and C& I applications.

Intelligent controls optimise energy consumption and maximise the use of renewable energy, while advanced safety features, including an integrated fire protection system, ensure a high level of safety. The system employs advanced lithium-ion technology for efficient energy storage and release, minimising energy loss during the charging and discharging processes.

The Huawei LUNA2000-H1 commercial ESS is managed by either the SmartLogger or SACU Networking; the type of communication transmission determines the appropriate version, depending on the requirements. The SACU option supports outdoor installation (IP65).
