Doe battery

Investing in America Agenda Will Generate \$16 Billion in Total Investment to Onshore Critical Materials Like Lithium, Support Good-Paying Union Jobs Across the Battery Sector, and Enhance the Nation's Economic Competitiveness

"We're in the midst of a manufacturing revival in the United States as the Biden-Harris Administration's Investing in America agenda continues to breathe new life into communities and local economies across the country," said U.S. Secretary of Energy Jennifer M. Granholm. "By positioning the U.S. at the forefront of advanced battery manufacturing, we are creating high-paying jobs and strengthening our global economic leadership and domestic energy security, all while supporting the clean energy transition."

"The Biden-Harris administration is using every available tool to onshore and friend-shore the supply chain for EVs and batteries, working with our allies and partners, for the benefit of our national security, our economy, and our planet," said John Podesta, Senior Advisor to President Biden for International Climate Policy. "Today's battery manufacturing grants from DOE will boost America's manufacturing base, create good-paying union jobs all over the country, and help tackle the climate crisis."

Nearly 90% of selectees are located in or adjacent to disadvantaged communities, advancing President Biden's Justice40 Initiative, which sets the goal that 40 percent of the overall benefits of certain federal investments in climate, clean energy, clean transportation, and other areas flow to disadvantaged communities that are marginalized by underinvestment and overburdened by pollution.

Selection for award negotiations is not a commitment by DOE to issue an award or provide funding. Before funding is issued, DOE and the applicants will undergo a negotiation process, and DOE will complete environmental review. DOE may cancel negotiations and rescind the selection for any reason during that time.

Bipartisan Infrastructure Law Funding Going to 20 Companies Across 12 States Will Strengthen America's Energy Independence, Create Good-Paying Construction and Manufacturing Jobs, and Lower Costs

"This is truly a remarkable time for manufacturing in America, as President Biden's Agenda and historic investments supercharge the private sector to ensure our clean energy future is American-made," said U.S. Secretary of Energy Jennifer M. Granholm. "Producing advanced batteries and components here at home will accelerate the transition away from fossil fuels to meet the strong demand for electric vehicles, creating more good-paying jobs across the country."
