

Eco friendly power

Eco friendly power

The Green Power Partnership program has a new website, Green Power Markets, which provides tools and resources to understand and engage with green power in the United States.

Carbon pollution-free electricity (CFE) is electrical energy produced from resources that generate no carbon emissions, including marine energy, solar, wind, hydrokinetic (including tidal, wave, current, and thermal), geothermal, hydroelectric, nuclear, renewably sourced hydrogen, and electrical energy generation from fossil resources to the extent there is active capture and storage of carbon dioxide emissions that meets EPA requirements. Executive Order (EO) 14057 requires agencies to achieve 100 percent CFE on a net annual basis by 2030.

These purchases promote growth in the carbon pollution-free electricity marketplace and help the agency avoid greenhouse gas emissions associated with its energy consumption.
