

## Electric vehicle market ouagadougou

Although the majority of electric 2& 3W vehicles are currently centred in Asia, this industry is anticipated to grow significantly in Africa over the following few years.

The examination of the electrification of two- and three-wheelers in the Sahel, with a concentration on Bamako (Mali) and Ouagadougou in order to comprehend the impact of this transformation and address any issues (Burkina Faso).

Today, 2& 3Ws make up two out of every three cars in Bamako and three out of every four cars in Ouagadougou. Second, because smaller cars are obviously less expensive to buy, they are more desirable to low-income citizens who have fewer financing alternatives.

Last but not least, unlike electric automobiles or buses, most two-wheelers can be quickly recharged in a few hours using a regular socket at home or in a business. As a result, they do not require the construction of substantial charging infrastructure to be a practical mode of transportation.

In Sahelian cities, electric 2& 3W provide a significant chance to reduce CO2 emissions and air pollution. In Ouagadougou and Bamako today, automobiles with internal combustion engines account for 60 to 75 percent of dangerous air pollutants and more than 50 percent of all CO2 vehicle emissions.
