We are pleased to announce that VoltiE Group Inc. has entered into an agreement to assume operational responsibilities for Enel X Way North America's EV charging network. This strategic transition follows the closure of Enel X Way USA on October 11, 2024, and marks a pivotal step toward ensuring uninterrupted service for JuiceBox products and the broader EV charging platform.

During this interim period, VoltiE Group Inc. will maintain software connectivity for JuiceBox products, enabling continued functionality for users. VoltiE's team is dedicated to ensuring a seamless transition and operational continuity as they work diligently to migrate existing customers to the new platform in the coming months.

This decision is in line with the Enel Group's strategic approach to e-mobility that pursues further growth by providing bundled offers, including private charging solutions, to its electricity customers as well as by developing public charging infrastructure in countries where it has an electricity retail business. By contrast, Enel North America has no retail electricity customer base and was active in the e-mobility segment only through the sale of charging hardware and software.

Additionally, the dynamics of the EV market in the US have changed quite a lot in the last year and, like many other companies, Enel X Way North America has been impacted by high interest rates which have increased the cost of scaling the charging infrastructure business in a framework of sustained uncertainty where EV sales growth expectations have not been met.

Full transition to electric mobility will only be possible through an extensive system of charging points that are safe, reliable and easy to use. That is why we have developed a wide range of infrastructure for public and domestic charging. This means that electric vehicles can be charged anywhere at any time, with a capacity of up to 350 kW. Not only that, several vehicles can be recharged simultaneously.

Waybox, Waypole and Waypump are just some of our products: they are suitable for any setting and are easy to manage via a smartphone and our online portals. These are smart solutions which offer the option of additional services, such as balancing the charge of electric power on the grid, advanced prioritization logistics and optimization of charging costs.

And our quest for innovation doesn't stop there! Our goal is to develop innovative products and advanced charging solutions for a more sustainable world. To do this, we have established strategic partnerships with the major electric vehicle competitions such as MotoE and Extreme E, for which we supply state-of-the-art charging equipment. Our collaboration with the world of e-motorsport enables us to look to the future, implementing new solutions that can move swiftly from the racetrack to the roads we use every day.

The electric transition starts with digitalization. For this reason, we have developed a series of intelligent solutions that allow you to manage electric vehicle charging at any time, with just one click. The strength of our offering lies in the ecosystem of products that communicate with each other, providing customers with a 360-degree monitoring experience.

Through the Enel X Way application, both individuals and companies can monitor and manage public, private, and home charging, check the status of charging points, and easily find the nearest Enel X Way station with a convenient map. With over 330.000 charging points available worldwide and accessible through our interactive map, we ensure a service that is always within reach, offering a range of pay-as-you-go or monthly subscription options for stress-free charging away from home.
