Energy commission ghana solar

The procedure to be followed to acquire the required licence under Act 832 is detailed within the The Licence Manual for Service Providers in the Renewable Energy Sector developed by the Energy Commission. It formally establishes the framework for licensing service providers as stipulated by the Renewable Energy Act 2011, Act 832, and provides guidelines for the application and grant of licence to service providers to conduct business in the renewable energy industry and for related matters.

A person who exports charcoal without a valid licence out of the country commits an offense and is liable on summary conviction to a fine of not exceeding two thousand penalty units or to a term of imprisonment not exceeding five years or to both.

The Energy Commission was set up by an Act of Parliament, the Energy Commission Act, 1997 (Act 541) with functions relating to the regulation, management, development and utilisation of energy resources in Ghana. The Energy Commission is the technical regulator of Ghana's electricity, natural gas and renewable energy industries, and the advisor to Government on energy matters.
