

## Energy independence chile

Chile is the most recent subsidiary opened by Akuo in Latin America, focusing on the development, construction and operation of new projects in wind, solar and storage energy sectors. The Chilean team quickly closed a first M& A transaction in 2022 for an 80MW solar portfolio composed of 9 distributed projects equipped with trackers, with end of construction due in 2023. These new projects cover a large part of the country in the regions of Maule (VII), ?uble (XVI), Araucan?a (IX) and Biob?o (VIII) and will thus supply all these regions in green power.

Akuo Chile has now put in place strong partnerships in the country to support Akuo's ambitions, allowing the team to be optimistic on the Group's growth and contribution brought to the country renewable expansion.

The development of these new projects paved the way to the opening of the Chilian office in Santiago in 2022, and to the recruitment of a multidisciplinary and growing team to tackle both the construction, the upcoming operation and the development of a new large portfolio of projects. The team focusses on the Group core technologies (wind, solar and storage) with both greenfield and M& A opportunities, and with project sizes ranging from 10 MW to several 100 MWs.

Given Chileans have a strong concern and interest in their country energy transition and the deployment of renewable energies, the recruitment of motivated collaborators has been smooth and will help the Group's development.
