

## Energy storage for microgrids ireland

This report by Economic Consulting Associates (ECA) highlights the impact of network charges on the investment case and operation of energy storage. The report recommends alternative network charging arrangements which significantly improve the investment case and operational profile of storage assets resulting in system benefits in terms of cost, renewable curtailment and carbon emissions.

This report explores the investment and employment potential for the energy storage sector in Ireland. It identifies key supply-side skills development needs such as research, training and development and quantifies the volumes of energy storage that will be needed by 2035 and 2050 in Ireland.

This report by Baringa Partners shows that allowing operational battery storage assets to operate in the all-island market at times of peak demand this winter would save up to EUR35 million in wholesale energy costs for consumers.

This position paper sets out ESI's views on the need for Long-Duration Energy Storage in Ireland and how a new procurement framework that provides a form of long-term revenue certainty is needed to support its deployment.

Baringa Partners show that energy storage is a game changer for Ireland and Northern Ireland's renewable energy ambitions in terms of its ability to manage renewable oversupply, reduce CO2 emissions, provide low carbon capacity and reduce costs to consumers. The report analyses different portfolios of energy storage and how they impact the all-island energy system in 2030.

This report, published jointly by Energy Storage Ireland and the Irish Wind Energy Association, shows how a strong electricity grid and new low-carbon technologies are essential to achieving the 70 per cent renewable electricity target by 2030.

This paper provides information on the characteristics of Grid-Scale Battery Energy Storage Systems and how safety is incorporated into their design, manufacture and operation. It is intended for use by policymakers, local communities, planning authorities, first responders and battery storage project developers.

This all-island storage roadmap provides an overview of the role energy storage can have in the safe and reliable operation of a grid with high levels of renewable energy integration and the benefits that energy storage can deliver in terms of consumer savings, reduced carbon emissions and reduced curtailment of renewable energy.

This report, produced for Energy Storage Ireland by energy market experts Baringa, shows how new zero-carbon technologies can ensure the all-island power grid remains strong and secure while cutting CO2

# Energy storage for microgrids ireland

emissions, driving down costs and reducing curtailment.
