

## Energy storage policy port of spain

The Spanish government announced its support for the development of technology for energy storage for renewables, to increase the system's flexibility and the stability of the network. The Strategy envisages having a storage capacity of about 20 GW by 2030 and reaching 30 GW by 2050, considering both large-scale and distributed storage.

Spain | Policy | The Strategy contemplates having a storage capacity of about 20 GW in 2030 and reaching 30 GW in 2050, considering both large-scale and distributed storage. The document identifies and analyses the challenges, defines the measures for their effective deployment, assesses the opportunities and quantifies the storage needs to ...

Long Duration Energy Storage (LDES) can ensure renewable energy is utilised in the system while decreasing reliance on CO2 emitting technologies. Key results of modelling the use of Long Duration Energy Storage (LDES) in the Spanish power system. Lower power system costs. Higher utilisation of renewable energy.

Spain has increased its energy storage target by 2030 to 22.5GW in the latest update of its National Energy and Climate Plan (NECP). The Spanish government, through the Ministry of Ecological Transition (MITECO), has passed a royal decree that updates the country's NECP targets between 2023-2030.
