

Energy storage research and development zimbabwe

ZERA locates research and development at the centre of energy regulation. The sector is buoyed by emerging developments and responds to industrial and consumer technologies and needs. The sector is evolving thus necessitates investment in research and development.

The Authority work with various research oriented partners on various energy related research and development initiatives. The partners include Research Council of Zimbabwe, Tobacco Research Board, Scientific Industrial Research and Development Centre (SIRDC), universities and others.

Electric vehicles (EV) are considered as a strong alternative of internal combustion engine vehicles expecting lower carbon emission. However, their actual benefits are not yet clearly verified while the energy efficiency can be improved in many ways. ...

A hybrid electrical energy storage (HEES) system consists of multiple banks of heterogeneous electrical energy storage (EES) elements placed between a power source and some load devices and providing charge storage and retrieval functions. For an HEES ...

Hybrid renewable energy systems are effective solutions to the problem of lack of electricity in many localities around the world. In this paper, a comparative study of ten different options of standalone hybrid energy systems is done. These systems are ...
