Eu solar grant for quot ghana quot

If you live in England or Wales, your installer can apply for a ?7,500 grant through the Boiler Upgrade Scheme to cut the cost of installing your air source heat pump. The scheme covers heat pump installations that take place before the end of March 2028.

If you live in Scotland, you can apply for an air source heat pump grant from Home Energy Scotland. This offers grants of ?7,500, which increases to ?9,000 for people in remote areas who qualify for the rural uplift. In Scotland, you can also apply for an interest-free loan of up to ?7,500 to cover the remaining costs. This means that most households in Scotland can get financial support of up to ?15,000 for installing an air source heat pump.

Update to Boiler Upgrade Scheme - May 2024 The grant eligibility rules are changing. Starting May 2024, properties will be eligible for grants even if they have outstanding EPC insulation recommendations.

When you install an air source heat pump with EDF, our MCS-accredited partner CB Heating will apply for the ?7,500 Boiler Upgrade Scheme grant on your behalf and subtract it from the cost of your installation. They'll work with you to make sure that you qualify for the grant before we install your heat pump, so you know how much you'll pay.

You apply for grants from the Home Energy Scotland Scheme directly, rather than through CB Heating and you need to apply before you install your air source heat pump. CB Heating will provide a quote to support your application once we've checked that your home is suitable for an air source heat pump.

If you need any help with your previous grant, it's best to follow the Ofgem instructions to ensure your payments continue and that you meet any obligations like meter readings and annual declarations.

An air source heat pump works by absorbing heat from the environment, even when temperatures are well below freezing. It extracts heat from the air around us and transfers that heat to the inside of your home, keeping you warm and comfortable.
