

Fairgreen Ltd

Fairgreen Ltd

What is a UPS? A UPS, or Uninterruptible Power Supply, is an electronic device designed to provide temporary backup power to electrical devices in the event of a power outage or fluctuation in the main power supply. It acts as a protective barrier between the devices..

Our Data Centre Service comes as a turnkey solution, or as components of a data center solution. This includes Physical Data Centre Structure, Active Data Centre equipment, and Advanced Professional Services.

Fairgreen offers a range of services, including customized technology for businesses and technical and business training for academic and corporate institutions, as well as individuals. With our End-User and/or Client Desktop Deployment Consultation, our team of professionals provides expert advice to customers, supporting them through selection, deployment and maintenance of their equipment and processes.

As part of the end-user services, we also provide office productivity software, such as Microsoft Office Suite, and integration to applications such as MS Exchange, SharePoint and other supported applications.

Fairgreen's Server Solutions Consulting provides expert advice services; pre- sales, installation, configuration, and maintenance of server equipment. The server equipment may be sold individually or as part of a turn-key solution, with integration into storage area networks (SAN) or other pre- existing solutions.

We are considering the addition of a variety of storage solutions to meet specific market needs. This service will focus on small, medium-sized and large organizations. While the solutions offered generally would be the same, the service will vary depending on market segment, complexity, and features required. These solutions would cover the following implementation services:

Fairgreen's consultation services in cooling are geared toward scoping and implementing precision cooling systems for telecommunication closets, server rooms, equipment rooms and data centers. We focus on In Row, In Room, and Floor Standing precision cooling systems from Schneider Electric. In delivering these services, we will rely on third-party provisions, especially in the area of refrigeration piping, and will form strategic partnerships with third parties in the delivery of implementation and support services.

One of our core businesses is the provision of local area network (LAN) services. We partner with WAN service providers if the service requires the integration of LAN and WAN. We also provide network consulting services on active systems and structured cabling (Fibre and Copper). This covers design, implementation and certification of LAN. This covers design, implementation and certification of high end/advanced network solutions such as:
