

Flow batteries prague

We were thrilled to meet 300 friends in Prague at the IFBF in June 2023 and pleased to welcome many others online. Our conference reached some of the highest and lowest places in Prague: from a cocktail reception on the hotel's 24th floor, to underground boat trips touring Prague's old waste waterworks. In between we explored the successes and challenges of the flow battery world.

During our packed and engaging poster session, our poster presenters described several other novel flow battery concepts. As ever, the speed pitches were both well done and well received, enticing other delegates to visit their specific posters.

The water industry is a huge consumer of electricity, and Jean Louis Cols of Invinity described the installation of a flow battery at a wastewater plant in Scotland to optimise their power requirements. Summarising, his conclusion was simple "VFBs they work, there's no doubt about that". A statement that should enhearten everyone in the flow battery industry.

One of the funny things about organising an annual conference like the IFBF is that you have to start thinking about next year's event before this year's event has even finished. In Prague we went one further, and we were delighted to announce that IFBF 2024 will be in Scotland, courtesy of Invinity. We hope this will include a tour of their manufacturing facility. It was a lovely, impromptu moment as Ji?? of Pinflow handed over the IFBF flag to Larry Zulch, CEO of Invinity on stage. Keep the last week in June 2024 free please!

So, thank you to everyone that attended, especially the presenters, chairs, supporters, sponsors and exhibitors. The feedback forms confirm that IFBF 2023 was a great success, and we thank you for all your comments.

It will discuss the latest innovations, policy updates and market challenges for the development of the flow battery sector. Business leaders, policy makers, developers and researchers will share information and forecasts around the thriving world of energy storage and the important role of flow batteries.
