Ge vernova products

These days, we're all trying to do more with less, but GE can help. Our upgrades and modernizations can help you get more from your existing assets. Discover the possibilities with our interactive upgrades selector.

At GE's Gas Power, we're pushing the boundaries of what's possible within gas power generation to help our customers achieve the right balance between power plant performance and environmental sustainability.

We have the broad experience and advanced equipment needed to reliably convert the full spectrum of liquid and gas fuels to energy, with natural gas-fueled combined cycle power plants offering one of the cleanest and most efficient methods of producing electricity from fossil fuels.

We've also combined decades of gas power technology leadership at GE with digitally-driven solutions so that our customers can take advantage of valuable insights and data to deliver innovation business outcomes.

Our world-class portfolio of gas power systems utilizes a century-long expertise and has expanded across the entire plant. It includes industry-leading gas and steam turbines, generators, heat recovery steam generators, condensers and other balance of plant equipment.

Today, as the world is demanding aggressive action to address climate change, GE believes that the accelerated and strategic deployment of renewables and gas power can change the trajectory for climate change and gas power plays a critical role in transitioning to a cleaner energy future.

GE Vernova is aiming to deploy small nuclear reactors across the developed world over the next decade, staking out a leadership position in a budding technology that could play a central role in meeting surging electricity demand and reducing carbon dioxide emissions.

GE Vernova is the spinoff of General Electric's former energy business. The company's stock has more than doubled since listing on the New York Stock Exchange last April, with investors seeing the Cambridge, Mass.-based company playing a key role in the future of the power industry through a portfolio of divisions that span nuclear, natural gas, wind and carbon capture.
