

Georgia solar power

Georgia solar power

Sunlight is one of Georgia's most abundant resources with an average of 218 sunny days per year. More than 3,000 MW of solar resources, or approximately 12% of our total capacity*, generate significant carbon-free energy for Georgians during sunny, daylight hours.

Georgia has consistently been in the SEIA Top 10 for solar photovoltaic installations for the past 10 years, and our state has one of the largest voluntary solar portfolios in the country.

Our capacity mix reflect nameplate capacity for renewable resources, program capacities for third-party Demand-Side Options (DSOs), and designated/demonstrated capacity for the remaining fuel types. A portion of the renewable generation capacity includes capacity where the renewable generator retains the related Renewable Energy Credits (RECs).

Not all solar facilities you may come across belong to Georgia Power. We have constructed and are operating 16 solar farms and additional demo facilities across the state of Georgia, many in partnership with military installations. The largest, at 128 MW of capacity, is located at Robins Air Force Base in Warner Robins, Georgia. Other facilities add carbon-free energy to the grid and supply renewable energy in support of our Community Solar program.
