Ghana and ghina government solar training

Gain professional certified PV training and accreditation aligned with national standards. Access industry networks from day one, connecting you with installers, suppliers, and local solar experts to kickstart and grow your solar business with confidence. GREEN is your portal into South Africa's largest installer network.

Fantastic overall training experience! Apart from the practical training I enjoyed learning the theory and understanding the fundamentals behind solar with now being able to apply that knowledge in a practical way. Extremely experienced and knowledgeable trainer Kobus Theron. Excellent, well-equipped training facility.

The SuperSolarSchool, with a mix of theory and practical, is quite a comprehensive course delivered by suitably qualified professionals. A must-have for any PV Installer as it takes you through all the basics required to do a proper PV design and installation.

SuperSolarSchool course is a great course for both novice and experienced PV installers. It has extensive training material covering all phases of PV ecosystem from design to installation and fundamentals of PV installer business side, delivered by experienced and knowledgeable trainers. The hand-on installation exercise was ideal for simulating real-world PV installations on different roof types.

After the first day of the course, I quickly found out that there's quite a dizzying amount of information to digest and understand. I applaud the course facilitators for actively engaging and interacting with all students for learning experience optimization. The course has given me much more confidence in the PV industry and will recommend it to all in the PV installers.

I enjoyed every single minute of training. The facility is very spacious and well ventilated. The trainers are very knowledgeable, they engage with the learners by asking and answering questions from the learners. I would definitely recommend this training to anyone that wants to get into the solar installation industry.

I studied electrical engineering, and I'm currently doing my honours degree. GREEN Solar Academy was recommended by an engineer where I did my internship as a solar installer - he had done a solar training course years ago! The course is a great stepping stone to obtaining your PV GreenCard, especially if you only know the practical side, not the theory. I didn't know how to size a system before SuperSolarSchool so I found that section really interesting. I found it easy to keep pace with the content, delivery was smooth and structured, gave me everything from the basics upwards.
