

How long do car batteries last

How long do car batteries last

Start stop is an emission reducing technology that is featured on many modern vehicles, and as your vehicle stops at traffic lights or during queuing traffic, the engine is turned off. This constant stopping and restarting of the engine means that your battery is put under a lot of pressure and therefore requires a start-stop battery to match. EFB and AGM batteries have specific technology within their construction that allows for this constant need of starting and stopping your engine.

If your vehicle does not have start stop technology then you will need a non-start stop battery. However, if you are attaching lots of additional electronic devices to your car, an upgrade to a start stop battery that has a higher load capacity would be a good option.

Make sure that you always, at the very least, buy like for like batteries, or you upgrade to an AGM from EFB or standard lead acid batteries. If you are unsure of your current vehicle battery or your specification needs, please contact us and one of our battery experts will help you find your new start/stop battery.

EFB stands for Enhanced Flooded Battery and are considered an entry level stop-start battery. They offer an improved charge acceptance and a greater cyclic durability when used in a reduced state of charge. EFB batteries typically offer up to 8 times more engine starts than a standard lead acid battery.

Every vehicle requirement is different and each of our van batteries, truck batteries and tractor batteries are different too. This makes it very important that you check the existing battery and your vehicle handbook before you buy a battery that you think may fit.

We stock a vast range of motorcycle batteries from leading brands such as Yuasa, Exide and LP. From Harley"s to Suzuki"s and R1"s to Speed Triple"s we have motorbike and scooter batteries to meet all performance levels.

Always check your current battery size dimensions and the CCA rating of your existing battery before purchasing a battery you think might fit. If you are unsure on the fitment of your new bike battery, contact us and we will be able to assist you in finding your new motorcycle battery.
