

Hydrogen energy storage warsaw

However, free (elemental) hydrogen is not found on our planet, and it must be obtained from either water or hydrocarbons. Moreover, H₂ is a gas at ambient conditions and it must be either compressed or liquefied to be stored as a fuel tank for mobile applications. This is why there is an intense ongoing research worldwide on storing hydrogen in the solid state, with the target hydrogen content of 7.5-9.0% by weight.

World of Hydrogen Expo is an event where industry leaders will showcase the latest technologies and innovative solutions in hydrogen technologies. The accompanying industry conference, an integral part of the expo, allows participants to update their knowledge, gain new skills, and discover the latest trends in hydrogen technology. Join us at the expo,

which offers an excellent opportunity to establish new business relationships and exchange experiences. The dynamic environment of the expo fosters business growth through direct contact with potential partners and competitors.

PTAK Warsaw Expo, the largest trade fair and congress centre and the leader in trade fair organisation in Central Europe, which organises over 100 trade fairs annually, attracting both exhibitors and visitors from all over the world.

Warsaw – Hydrogen Bar System (HBS) announces the successful granting of a ground-breaking patent for hydrogen storage by the esteemed Polish patent office. This remarkable achievement establishes HBS as a trailblazer in Poland, with the patent tailored to reshape how we store hydrogen globally.

The innovation signals a new approach to using hydrogen for industries such as industrial zones, hydrogen hubs, and growing hydrogen valleys. At the heart of this innovation is the Hydrogen Bar System's ability to efficiently store, and distribute hydrogen, paving the way for a promising future in these emerging areas.

Jerzy Jurasz, the visionary inventor and owner of the Hydrogen Bar System, underscores the significance of this achievement, stating, "This breakthrough positions us to license our solution globally. Our solution not only enhances hydrogen storage and transport but also transforms hydrogen production, revolutionizing how we use hydrogen."

Anticipating increased industry interest, the HBS technology is poised to become an asset for industry investors. This technology promises to enhance technical skills, drive local technological advancement, and boost competitiveness. Industry players can expand their presence by obtaining essential U-tube components and embracing the technology that bolsters their competitive edge.

From a family's energy needs to a city's hydrogen demand, HBS proves its scalability. Simple U-tube storage solutions can serve both daily needs and system stability. Scaling up, HBS adapts easily to multiply storage capacity and connections. As HBS technology advances, it holds promise for national-level solutions, connecting cities, industries, and cross-border operations. HBS is poised to reshape hydrogen utilization, enhancing sustainability across sectors and scales.

HBS provides a smart investment avenue for hydrogen production and storage initiatives within collaborative frameworks like hydrogen valleys, energy hubs, and industrial zones. With a focus on cost-effectiveness, this technology aligns with the goals of regional governments promoting innovation-driven spheres. Industry investors and local government representatives can leverage synergy by jointly investing in this forward-looking technology that propels us toward a hydrogen-powered future.

Polish state-controlled oil and gas company, PGNiG has started working on projects for the use of hydrogen in the energy and automotive sectors. The company will investigate the possibilities of hydrogen storage and transport through the gas network.

With the implementation of planned hydrogen projects, PGNiG will join the development of the alternative fuels market, and thus help Poland meet their EU climate policy goals. Over the next four years, PGNiG plans to spend over \$8 million on research related to the new program.
