

Islamabad electricity generation

Islamabad electricity generation

Electricity is considered to be life line of an economy as it is pivotal for industrial development that ultimately contributes to the socio-economic development of a country. Pakistan electricity market is evolved through different eras and private sector entered in market in 1985. WAPDA is still a big player of this market. However, electricity generated by private sector from thermal and alternate energy sources eroded its monopoly over the time.

At present, the capacity of two Floating Storage and Re-gasification Units (FSRU) for RLNG is 1,200 million cubic feet per day (mmcf). RLNG is being imported to bridge the widening gap between demand and supply of gas in the country.

Petroleum crude reached \$4.22 billion in July-April FY22 against \$2.41 billion in the same period in FY21. During July-March FY22, the total processed imported crude stood at one million tons while the processed local crude was recorded at 2.31 million tons.
