

Lithium battery price prediction 2030

Lithium battery price prediction 2030

As battery applications become mainstream across EV, stationary, and consumer electronics market sectors, the move to expand product offerings and the need for sustainable battery materials from recycling sources will grow exponentially. This conference will bring together the key international organizations in the battery recycling value chain including battery manufacturers, R& D, recyclers, OEMs, and policymakers to present the latest advances in recycling technologies, market overview, and international regulatory implementation.

CET offers sponsorships which will maximize your exposure before, during and after each event. We can help you achieve your goals by customizing a package that meets with your objectives and provide you with an integrated marketing program for the entire year. Opportunities include but are not limited to exhibits, presentations, branding, targeted delegate dinners and webinars utilizing our extensive database of battery and automotive professionals.

Final Brochure Deadline | Friday, November 2 Your company's logo and talk information within the final brochure, promoted heavily through email and mailed directly to 45,000+ prospective delegates.
