

Malawi electric vehicle market

A vehicle that uses one or more electric motors for propulsion is referred to as an electric vehicle (EV). It can be driven independently by a battery, a collector system, or electricity from extravehicular sources (sometimes charged by solar panels, or by converting fuel to electricity using fuel cells or a generator).

Road and rail vehicles, surface and underwater watercraft, electric aeroplanes, and electric spacecraft are all examples of EVs. For road cars, EVs form a future mobility concept known as Connected, Autonomous, Shared and Electric (CASE) Mobility along with other upcoming automotive technologies including autonomous driving, connected vehicles, and shared mobility.

Agilitee Africa, a South African maker of electrical vehicles, is looking at Malawi as a potential new market for electric vehicles as part of an expansion drive that has seen the green-tech company open offices in many African nations.

Agilitee Africa has a variety of products, but for the Malawi market they want to bring electrical automobiles and motorcycles, a business that will create jobs in just one and a half years once begun.

The EV technology has generated enthusiasm around the world as nations work together to cut carbon emissions, a major issue that is contributing to global warming. the company is actively working to hire directors in order to have its headquarters located in Lilongwe.

Malawi needs more foreign direct investment (FDI) inflow, therefore the intention to launch the market there is timely. Malawi is having difficulty luring foreign private investment due to its tiny market and difficult business environment.
