

Maldives flow battery technology

The energy department is in charge of formulating policies related to the energy sector in line with the legislative framework of the Republic of Maldives. It strengthens international cooperation to boost both investment and know-how in the sector and is committed to raise awareness on energy resources and consumption. The department is divided in two sections - Policy and Sector Development, and Energy Technology Development. These are a total of 6 Units functioning under these two Sections.

The energy technology development section aims at limiting energy misuse and waste. It advises the government and legal sectors on efficient energy use, on low-carbon development strategies, and renewable energy technologies. With regards to the latter, the section collects data on renewable sources available in the Maldives, it develops the know-how in the fields, and implements relevant projects.

The aim of the market sounding process is to gather insights and feedback from the bidder community. It is important to understand that this market sounding is conducted solely for informational purposes and does not constitute a formal procurement process. Taking part in this market sounding process will neither confer advantages nor disadvantages to respondents in any subsequent procurement processes.
