## Microgrid control liberia

The ARC microgrid controller performs under the most demanding conditions for applications where power reliability is critical. Extreme weather? Traditional grid blackouts? Behind-the-meter or off-grid, ARC has your back with stable, resilient power.

Real-time energy management controls ensure system stability and resiliency. The ARC microgrid controller sends data every second to balance power generation with load. With Ageto's microgrid solutions, you and your power connectivity won't miss a beat.

The ARC microgrid controller interfaces with a wide variety of conventional and renewable energy resources, including energy storage inverters, photovoltaic solar inverters, diesel and natural gas generators, wind turbines, weather stations, power meters, and sheddable loads.

Monitor and control all your microgrid assets from one user-friendly dashboard, both locally from the touchscreen and remotely via a secure VPN connection. ARC records data every second so you can monitor loads, solar estimates, energy production, and more for precision trending and troubleshooting.

The ARC microgrid controller automatically sends email alerts when there's an alarm from any of your microgrid assets. ARC stores alarms and system events so you can view them anytime.

The ARC microgrid controller is encased in a durable NEMA 3R enclosure, protecting your microgrid infrastructure and your investment. The ARC cabinet stands strong through heat, cold, rain, snow, sleet, humidity, and high altitude conditions.

ARC delivers microgrid solutions configured for your application -- rural energy systems, remote communities, island resorts, remote mine sites, and commercial facilities -- so your island microgrid can meet all your electricity needs with generator-off operation, minimum generator loading, sheddable loads, and spinning reserve management.

ARC automatically optimizes the microgrid around the utility rate seamlessly by reducing the amount of energy purchased from utilities during peak times with time of use (TOU) shifting, reducing the facility peak with demand charge management, and controlling the power flow at the point of common coupling (PCC) to meet utility interconnect requirements. Your distributed energy resources are always working for you to save on your utility bill while providing resilient power in case of outages.

Ageto's microgrid solutions have gotten power systems running around the world -- from connected cities to remote islands, from the heat and humidity of Liberia to the frigid temperatures of Alaska. If you need your system running, Ageto delivers.

# Microgrid control liberia

You need a system you and your customers can rely on. With the ARC microgrid controller, you don't have to worry. Our microgrid solutions lead the industry in equipment-agnostic integration and seamless operation. Ageto is in the business of making microgrids work.

You build state-of-the-art distributed energy resources. Ageto has an advanced microgrid controller that will work with any renewable energy resource, including yours. Talk about a win-win. Together, we can make renewable energy integration both possible and profitable.

What will your renewable energy microgrid give you the power to do? Say no to the status quo? Weather the storm? Leave the world better than you found it? Ageto's microgrid solutions are designed to eliminate the compromises of managing renewable energy and put all the system's power in your hands.
