

# Micronesia hospital energy storage

## Micronesia hospital energy storage

This project is being funded by the Japanese government's Official Development Assistance (ODA) to support the reduction of carbon emissions by utilizing renewable energy resources as an alternative to diesel electric power generation.

Kyocera began supplying solar modules to developing countries in 1984 as part of the Japanese government's ODA project. Since then, it has been involved in approximately 40 ODA projects and has supplied a total of more than 3 megawatts of solar power generating systems to countries in Asia and Africa.

In 1992 and 1996, ice machines that utilize Kyocera's solar power generations were installed in the Marshall Islands for use in preserving the fishing industry's catches. The 209kW installation at Majuro Hospital is Kyocera's third project in the country. Kyocera remains committed to help solve global environmental issues including efforts to reduce carbon emissions.
