Another NCP car park is located at Colonnades - Porchester Terrace, Bayswater, London, W2 1AA (Phone: 020 7221 8020). Car Parking is also located on Church Street and Bishops Bridge Road (Opening Hours: 08:00-20:00 hrs, Mon - Sat, closed Sun).

From Paddington Station: Walk along Platform 8 about 100 metres and up the right-hand set of steps. Turn right along the walkway following the Paddington Central signs that leads you alongside a towpath with the canal on your right. Before you reach the footbridge over the towpath, turn left between two large buildings.

If you are travelling from the east, exit the A40 after crossing the A5 Edgware Road. This will bring you down onto a large roundabout on Harrow Road. This roundabout has gardens in the middle of it and half of it is under the A40. Ahead you will see Bishops Bridge. Keep this on your left, pass Travis Perkins builder's merchants and take the next exit rising under the A40. You will then arrive onto another roundabout. Take the second exit, with the cream-coloured Monsoon building on your left. This will lead to the entrance road onto the site.

The tech giant said it will begin hiring scientists and engineers for the hub, which will pioneer work to develop language models and their supporting infrastructure, and create tools for foundation models.

The move forms part of Microsoft's ?2.5 billion investment proposals for the UK, which will also including bringing 20,000 of the most advanced graphic processors or GPUs to the country by 2026.

In a blog post Suleyman today said: "There is an enormous pool of AI talent and expertise in the UK, and Microsoft AI plans to make a significant, long-term investment in the region as we begin hiring the best AI scientists and engineers into this new AI hub.

"As a British citizen, born and raised in London, I'm proud to have co-founded and built a cutting-edge AI business here. I'm deeply aware of the extraordinary talent pool and AI ecosystem in the UK, and I'm excited to make this commitment to the UK on behalf of Microsoft AI."

The commitment marks a dramatic reversal of Microsoft's apparent downbeat attitude towards investment in London after its blockbuster \$69 billion Activision merger was held up by the UK competition regulator last year.

At the time, Microsoft president Brad Smith had described the move as "Probably the darkest day in our four decades in Britain...it does more than shake our confidence in the future of the opportunity to grow a technology business in Britain than we've ever confronted before."

In an interview with the Standard last year, Suleyman was equally downbeat. He said: "I think the truth is London's lost its confidence. It's not what it was in the 2000s. And it needs to find back its passion for risk-taking, innovation, and invention.

Microsoft said it plans to "grow rapidly" at the new hub, which will be based at 2 Kingdom Street in the modern Paddington Central office district, situated opposite the global headquarters of Vodafone, which in January signed a 10-year, \$1.5 billion deal with the tech giant over AI and cloud services.
