Minsk solar energy

To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

Below is the average daily output per kW of Solar PV installed for each season, along with the ideal solar panel tilt angles calculated for various locations in Belarus. Click on any location for more detailed information.

Explore the solar photovoltaic (PV) potential across 2 locations in Belarus, from Zhodzina to Minsk. We have utilized empirical solar and meteorological data obtained from NASA's POWER API to determine solar PV potential and identify the optimal panel tilt angles for these locations.

Belarus ranks 65th in the world for cumulative solar PV capacity, with 269 total MW's of solar PV installed. Each year Belarus is generating 29 Watts from solar PV per capita (Belarus ranks 57th in the world for solar PV Watts generated per capita). [source]

At this time, there are no specific incentives for businesses wanting to install solar energy in Belarus. However, the government has recently announced plans to increase its renewable energy capacity by 2020 and is encouraging private companies to invest in renewable energy projects. Additionally, the government has implemented a number of tax breaks and other financial incentives for businesses investing in renewable energy projects.

Do you have more up to date information than this on incentives towards solar PV projects in Belarus? Please reach out to us and help us keep this information current. Thanks!

Elevate the performance of your solar PV installation by utilizing our thorough guide. Determine the best panel tilt angle using real-world data, debunk prevalent misconceptions and grasp how geographical location influences solar power yield.

MINSK, 11 July (BelTA) - RECOM Company, which specializes in renewable sources of energy, will increase its capacity by investing in the production of photovoltaic modules in Belarus, BelTA learned from the company's website.

A joint project is being implemented at a site located 2km away from the Minsk National Airport. The factory with the output capacity of 300MW in PV modules per annum will be commissioned in late October 2019.

According to RECOM CEO Hamlet Tunyan, the factory will utilize the latest technologies to make top-quality products. The project focuses mainly on European markets as well as markets of the USA and Asia.

According to the source, the factory will open up new opportunities for the development of solar energy industry in Belarus. "We believe this will contribute to the spread of the culture of renewable energy in Belarus too, diversify their energy mix, and of course, create jobs in the economy," Hamlet Tunyan is quoted as saying.

RECOM Company is registered in Germany and cooperates with manufacturers from all over the globe. Sales offices are located in Europe, countries of America, Asia, and the Middle East. ZAO RecomBel, which is a resident company of the China-Belarus industrial park Great Stone, is in charge of implementing the project from the Belarusian side.
