

Mobile phone batteries

Both smartphones come with a replaceable back. While CMF offers cases with a lanyard, wallet, and stand, HMD came up with a different approach with its Fusion smartphone's cases:

Coming to their specifications now, the HMD Fusion comes with a 6.56-inch IPS LCD panel with HD+ resolution and 90Hz refresh rate support. On the other hand, you get a 6.67-inch AMOLED picture with FHD+ resolution and 120Hz refresh rate support.

For photography, you get a 108-megapixel main camera and a 2-megapixel depth sensor on the back of the HMD Fusion. On the other hand, a 50-megapixel main camera along with a 2-megapixel depth sensor are available on the CMF Phone 1.

Mustafa is new on the block and is a tech geek who is currently working with Digit as a News Writer. He tests the new gadgets that come on board and writes for the news desk. He has found his way with words and you can count on him when in need of tech advice. No judgement. He is based out of Delhi, he's your person for good photos, good food recommendations, and to know about anything GenZ. [View Full Profile](#)

Digit is one of the most trusted and popular technology media portals in India. At Digit it is our goal to help Indian technology users decide what tech products they should buy. We do this by testing thousands of products in our two test labs in Noida and Mumbai, to arrive at in-depth and unbiased buying advice for millions of Indians.

One of the best 5G phones under \$160. Processor with enough power for most standard tasks, a high refresh rate 120Hz screen and a large battery with fast 45W charging, very rare to see in phones under \$200. It should work with any Vodafone MVNO such as Kogan Mobile's cheap 365 day plans.

It's actually 4+4 .. it uses available storage as supplementary RAM. I bought this phone last week at Wools for \$179 to replace a Xiaomi Note 10 4G 000 carrier nuke while I wait for a Xiaomi Redmi 13 Pro 5G from Ali. . So far reasonably happy with the phone, although it is noticeably laggy compared to the Note 10 and the display quality is a little lower. It also has some missing features in the GUI.. it is a fast charger though, perhaps a half hour .. ? … NFC works fine.
