## National solar project ghana

**Community Description**Guakudow is a very small village located in the West Mamprusi District of the Northern Region. It is deep within the Shea parklands. The community consists of one primary school, one mosque, three small shops, two tailors and approximately one hundred and fifty households.

The entire community farms and little to none of the production are considered commercial farming. The community is very unified but has a minimal opportunity for community development. The people grow maize, rice, groundnut, beans, soybeans, cowpeas, millet, peppers, sweet peppers, tomatoes, garden eggs, okra, onions, and alefu.

**Problem Addressed**In 2005 the village's first hand-controlled borehole well was built. For several years it has been broken and unusable. The water smells very bad and is not safe for any use at all. The villagers must now walk long distances to fetch water. This especially affects the education of school children who are responsible for fetching water before they can attend class.

**Project Administration**The project will be implemented under the direction of Nana Kudjoe Kesse, Executive Director and Chief Operations Officer of H2O Africa Care, with assistance from Solomon Amuzu. In working with Water Charity, Nana previously completed many borehole and bathroom projects.

**Monitoring and Maintenance**The community will provide a person to be in charge of the facility. The people of the village will pay a small fee to pump water. These funds will be used for maintenance and repairs when needed. The H2O team will do a monthly follow-up to monitor the functioning of the facility and make sure it is being properly used. A general communal labor team will be organized for cleanup/maintenance when the need arises.
