

Netherlands panasonic solar panels

Design a PV system for your location within the Netherlands, view the simulated solar power production of the whole Netherlands or find out what solar panels could offer you. Discover and play around with the several online, free-to-use tools and models developed within the PVMD group.

Are you considering to install solar panels on your roof? Use this easy Rooftop Scan to quickly find out if your roof is suitable for solar panels and how much you could possibly save on your electricity bill.

Design a detailed PV system for any location within the Netherlands and let the model calculate the performance and economics of this system. The calculations are based on the real-time weather and climate data from the KNMI (Royal Dutch Meteorological Institute).

Mouse over and have a look at today's Dutch solar power production in this interactive graph. Would you like to get an idea of how solar power in the Netherlands is growing? Click here to view the Dutch daily and annual solar energy production in detail.

View the simulation results of a 6.9 MWp virtual solar power plant in the province of Zuid-Holland. Real-time weather data and the PV Portal performance calculation model are used to calculate the power production of this system.

Solar power in the Netherlands has an installed capacity of around 23,904 megawatt (MW) of photovoltaics as of the end of 2023. Around 4,304 MW of new capacity was installed during 2023.

Market research firm GlobalData projects Dutch solar PV capacity could rise to 55,000 MW (55 GW) by 2035. Longer-term projections from the Netherlands Organisation for Applied Scientific Research estimate national PV capacity could reach 180 GW by 2050.

2008 Subsidies of 33 euro cents per kWh were introduced; but initially failed to attract much development. However, when they were curtailed, the Dutch banded together to make large purchases at discount instead.

2015 The Netherlands saw its capacity grow by around 357 MW during 2015, the fourth highest in Europe in that year, its installed capacity per inhabitant remained low at 83.1 Watts per inhabitant compared to the European average of 186.1 Wp/inhab; in particular compared to its neighbour Belgium at 286.7 Wp/inhab.

2016 The largest solar installation in the Netherlands, the 6 MW array at the Wadden-Island Ameland

Netherlands panasonic solar panels

was officially opened in June 2016. Installed capacity per capita rose to 120.1 W, thirteenth position in the EU and nearer to the EU average of 197.8 W than in preceding years.

2022 A new solar carport measuring 1 kilometer by 500 meters opened in Flevoland. The 90.000 solar panels with 35 MWp will power 10.000 households.

In addition to photovoltaics, solar energy is used extensively for heating water, with 669.313 m² installed by the end of 2020. Generating a total of 326 GWh heat energy in 2020.
