

North korea microgrid operation

The "Open Microgrid Project of Korea Electric Power Corporation (KEPCO)" covers the construction and demonstration of two types of microgrids designed and operated by KEPCO: a consumer community-based independent microgrid (MG) and a grid-connected microgrid, involving different types of distributed energy resources such as renewable energy, ESS and etc. The project stemmed from KEPCO's recognition of the importance of microgrid (MG) technology that can ensure reliability and resilience in energy supply while contributing to resolving energy production and consumption problems.

ISGAN. All Rights Reserved. The ISGAN TCP is part of a network of autonomous collaborative partnerships focused on a wide range of energy technologies known as Technology Collaboration Programmes or TCPs. The TCPs are organised under the auspices of the International Energy Agency (IEA), but the TCPs are functionally and legally autonomous. Views, findings and publications of the ISGAN TCP do not necessarily represent the views or policies of the IEA Secretariat or its individual member countries.
