

## Off-grid systems slovenia

**Solar Market Outlook in Slovenia** There is a solar power boom in Slovenia and it mirrors the rapid growth of the renewable energy sector in most parts of Europe. In 2019, there were 2,496 solar PV systems that were installed in Slovenia generating a total solar capacity of 31.2 MW. Majority of these PV systems were for residential installations. This was a huge increase from the previous year (2018) bringing an increase of up to 233%.

The significant drop in the price of solar components can be attributed to this growth in the Slovenian solar market. In addition, the support models and lower administrative barriers are also a factor.

The continued effort to push the growth of the country's solar energy sector has resulted in the generation of 268 GWh of solar energy production or 1.8% of the country's total energy output. The solar industry in Slovenia is made up of 20 companies that generate an annual income of 100 Million Euros. The solar energy sector is forecasted to continue its growth in the next few years especially with the development of a 6 MW solar park in 2020.

There are a few local suppliers and manufacturers of solar power equipment in Slovenia. However, most of the solar panels and components that are used for solar installations in the country are exported from global and online suppliers.

**Wholesale Off-Grid Inverters PV System?** An off-grid solar system, also known as off-the-grid or standalone, is a photovoltaic system that has no access to the utility grid. For this reason, off-grid solar systems involve both solar panels and battery storage, so the power can be coming to the building from either of these two sources at any given time -- depending on the solar situation.

As was mentioned earlier, the primary characteristic of an off-grid solar system is the fact that it has no access to the utility grid. And this actually is also one of the advantages that this kind of solar system offers. The reason why this is advantageous is the fact that with no access to the utility grid, off-grid solar systems can be cheaper than extending power lines in certain remote areas.

Moreover, living off the grid makes a solar system self-sufficient, and that can be a bonus for a lot of people. For these people, this feeling of self-sufficiency is worth more than saving money. Energy self-sufficiency is also a form of security.

Our website lists all sorts of off-grid inverters for PV systems from established and well-respected manufacturers and brands all over the world. As a result, you can expect that the off-grid inverters that we offer are of the best variety. They are characterized by numerous remarkable features, such as higher efficiency, sturdy construction, and a longer lifespan. In other words, all the off-grid inverters that we offer

# Off-grid systems slovenia

will undoubtedly have the ability to fulfill all your solar power needs.

Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.
