Gabon has inaugurated its first photovoltaic plant, the largest in Central Africa. Developer Solen SA Gabon has said it aims to expand the capacity of the Ayem? project to 30 MW to supply more than 300,000 homes. Gabon has inaugurated its first photovoltaic project. The Ayem? photovoltaic plant is located in the Plaine-Ayeme area in northwestern Gabon, about 30 km from the country's capital Libreville.

The company has reportedly said it aims to expand the facility to 30 MW under a power purchase agreement (PPA) with state-owned utility Soci?t? d'Energie et d'Eau du Gabon (SEEG). The project is expected to supply 300,000 households and create 150 direct jobs.

The plant, announced in 2021, faced delays and funding reductions after construction began in August 2022. Initially planned as a 120 MW project split into two 60 MW phases, it was scaled back during development.

It is indeed an important milestone in the production and distribution of clean, sustainable and modern electricity, thus illustrating our country's commitment to improving access to energy and combating climate change," he said.
