

Schneider electric home energy system

Schneider electric home energy system

Schneider Energy Monitor (formerly Wiser Home Power Monitor) provides 24/7 real-time monitoring and control of your energy usage. Manage use with Schneider X Series connected plugs and switches for control at the device level.

When the sun is shining, it will pull power from your solar panels. When the sun goes down, it will pull from your battery. By pulling power from the grid less often, your home will be using renewable energy sources whenever possible.

Simplify the process of adding solar, backup battery and EV charging to your home. Pulse is built to make that process easier and faster for electricians, helping reduce the time and cost of installation. Plus, because Pulse can intelligently control what's powered and when, it can help avoid the costly and time-consuming process of upgrading the electricity service to your home.
