S?o Tom? and Pr?ncipe has high levels of literacy compared to many other developing countries. However, the country's young demographic - over 60% of the population is under the age of 24 - presents significant challenges in the education sector which the government is eager to address.

Thus, the goals of the education initiative include improving access to quality education, reducing the average number of students per classroom, and preparing students for the future labor market.

Once these projects are completed, the Ministry of Education, Culture, and Science will take responsibility for staffing the schools with qualified teachers or teachers-in-training, as well as the maintenance and repair of the classrooms and facilities.

This initiative is being overseen and monitored by a steering committee comprised of Kosmos, the Ministry of Education, Culture and Science, and ANP-STP. Kosmos is currently working with the Ministry of Education, Culture, and Science and ANP-STP to move the project forward and ensure high standards for construction.
