

Single stage traction inverter

Single stage traction inverter

Our 3 and 5 up single stage solutions are perfect for anything from do-it-yourself projects to professional use as they are equipment that is designed to thrive in any environment, due to their advanced safety features and easy operation. For more demanding applications, they are fully equipped with high pressure operation up to 135 psig and a 60 gallon vertical ASME receiver tank, making Ingersoll Rand the ideal choice for flexibility and high quality performance.

Our pressure lubricated reciprocating compressors are designed to withstand even the most demanding industrial environments as the solid cast-iron construction of the head, crankcase, cylinders, and deep-finned inner coolers facilitate durability and reliability. By reducing friction through innovative pressure lubrication technology we are able to provide a solution with reduced downtime and an extended life, promising highly efficient results to keep you moving forward.

By using the same durable technology found in all of our two-stage reciprocating compressors, at Ingersoll Rand we have produced highly efficient solutions with base-mounted piston technology that can provide pressure as high as 5,000 psig (345 barg). These systems are typically used for applications such as: refuelling stations, PBM, power plants and engine starting.

We understand the importance of air purity, which is why it is the driving force behind our oil-free system. This solution combines 100% oil-less operation with quality, reliability and robust, durable components to provide a trusted service and low maintenance costs.

We believe that research and testing is key to producing high quality, efficient solutions which is why our portfolio of reciprocating compressors have been thoroughly put through their paces to ensure you are receiving the best service possible. As a system which can be incorporated into commercial and industrial applications, the consistency, reliability and durability of this range has been at the forefront of innovating these products - to us, flexibility should be confirmed and promised with every purchase made.
