

Site antigravitybatteries-uk co uk antigravity batteries

after owning a Antigravity battery previously, would say the fit and finish have improved with this latest version. Found the packaging and documentation in good order and the terminal hardware worked well with the original on the bike. Thanks

I will need some more time to review the battery, but I can comment on how much lighter it is than the standard. I can also definitely feel that weight difference in slow technical riding. Will see how the reliability of it is. Also, great service from antigravity batteries UK. Very helpful and I received my battery super quick!

The Antigravity Batteries AG801 8-Cell Motorsports batteries is one of the most popular models. It is an extremely powerful battery in a small package. At a very small 4.25" Length x 2.25" Depth and 3.75" height (to the top of the terminals) this battery offers extreme power in the most compact size in Lithium Motorsport batteries. This battery is best used for applications where extreme weight loss and ultra compact size are desired and can be used for bike from 600cc street use and 1200cc race use. ADHESIVE BACKED FOAM INCLUDED IN BOX FOR EASY INSTALLATION.

Very good leadtime, nice packaging, good product as expected. Only comment is on the wiring ports that comes with two screws but no blocking features. Either a male thread (that you can connect with nylon nuts) or a special washer would make the connection safe, as this is for aircraft application.

Item exactly as described by this website and other independent sources so quality, features and function is entirely as expected. The buying process is hassle free with good communication and delivery is FAST. I am very pleased. Thanks.

You MUST only charge our lithium batteries with a lithium specific battery charger, (such as the Optimate battery chargers offered on this website) the use of any other type of battery charger is likely to damage the battery and invalidate the guarantee.
