In this article, we'll not only discuss the cost of the Tesla Powerwall 3 but the array of benefits it provides, including enhanced energy efficiency, seamless integration with solar systems and potential savings on energy bills.

At Glow Green, we offer the Tesla Powerwall 3 in various configurations to suit your energy storage needs. The cost of the Powerwall 3 system primarily depends on the number of battery packs you choose, ranging from one to three units.

A single Powerwall 3 pack, including the Tesla Gateway, is priced at £8,095, including installation. For those requiring more capacity, a two-pack system costs £15,190, while the maximum configuration of three Powerwall 3 packs is available for £22,285.

It's worth noting that the inverter size (3.68kW, 5kW or 11.04kW) does not affect the overall price of the system. This pricing structure allows our customers to select the most appropriate energy storage solution for their homes without worrying about additional costs for higher power output capabilities.

The Tesla Powerwall 3 boasts a substantial 13.5 kWh of usable energy storage capacity which means an average household can power essential appliances for approximately 12 hours during an outage, store excess solar energy for evening use and significantly reduce reliance on grid electricity.

With a continuous power output of up to 11.5 kW, the Powerwall 3 can effortlessly power high-consumption appliances and equipment. This robust output ensures that even during peak usage times, your home's energy needs are met without strain.

The Powerwall 3 features an integrated DC-coupled solar inverter which eliminates the need for a separate inverter. This integration simplifies installation, reduces potential points of failure and enhances overall system efficiency.

The Powerwall 3 has a modular design that makes it easy to expand the system. Homeowners can connect multiple units together to create a customised energy storage solution that fits their needs, whether they live in a small home or a larger property. This flexibility allows users to start with one unit and add more as or when their energy requirements grow.

With a remarkable 97.5% solar-to-home/grid efficiency and an 89% round-trip efficiency, the Powerwall 3 represents a significant improvement over its predecessors. This increased efficiency translates to more usable energy and potentially greater savings for homeowners.

The Tesla app provides real-time monitoring and control of the Powerwall 3 system. Users can track energy usage, adjust settings and optimise their energy consumption patterns, all from their smartphones. This level of control allows for more efficient energy use and potential cost savings.

During grid outages, the Powerwall 3 automatically switches to stored energy which ensures that essential appliances continue to function. This seamless transition provides peace of mind and uninterrupted power supply during emergencies.
